

Error Log Entry

What error message did you encounter (if any)?	For TimeConversion: The output showed 3:4 instead of 3:04 for 184 mins	For ObjectHeight: The height is wrong for t = 2, output wasn't 80.4
What unexpected behavior did your program exhibit?	For TimeConversion: Leftover minutes under 10 were printed without a leading zero.	For ObjectHeight: Incorrect numeric results.
What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)	For TimeConversion: I combined hours + ":" + minutes without formatting minutes to two digits.	For ObjectHeight: I used the "4.9 * time * time"
Include a screenshot of specific lines of code.	For TimeConversion: <code>String formattedMinutes = (minutes < 10) ? "0" + minutes : String.valueOf(minutes);</code>	For ObjectHeight: <code>4.9 * time * time;</code>
How did you fix the issue?	For ObjectTime: I replaced t^2 with time * time.	For TimeConversion: Formatted the mins with two digits
Provide the corrected code or solution using a screenshot.	For ObjectHeight: <code>double height = 100 - 4.9 * time * time;</code>	For TimeConversion: <code>System.out.println("The time is: " + hours + ":" + formattedMinutes);</code>
